# Lab Evaluation-I

Problem: In the given Romania map, find the minimum distance travelled by a person from a starting city to destination city.

For example, the starting city is Oradea and destination city is Lugoj. The minimum distance travelled by a person from Oradea to Lugoj is 375 km.

Sample Input:

Enter starting city = Oradea

Enter destination city = Lugoj

Expected Output:

Minimum distance travelled is 375 km.
